

Methodology of SSE STAR New Materials Index

SSE STAR New Materials Index selects 50 securities of listed companies with the largest market capitalization engaged in advanced steel, advanced non-ferrous metals, advanced chemicals, advanced inorganic non-metals, key strategic materials and other fields from STAR market as constituents. The index is to measure the performance of new materials industry of STAR market.

1. Index Name and Index Code

- Index Name: SSE STAR New Materials Index
- Shortened Name: STAR New Materials
- Index Code: 000689

2. Base Date and Base Value

The base date is December 31, 2019. The base value is 1000.

3. Index Eligibility

3.1 Index Universe

The index universe includes stocks and CDRs issued by red-chip enterprises listed on SSE Science and Technology Innovation Board satisfying the following conditions.

(1) The listing time is more than six months. For securities with the daily average total market value since its initial listing ranked top 5 on SSE Science and Technology Innovation Board, the listing time is more than three months.

(2) Non -*ST securities.

3.2 Eligible Securities

Liquidity Criteria: securities ranked in the top 90% in the index universe in terms of average daily trading value over the past year in descending order are eligible for inclusion.

3.3 Constituents Selection

(1) For the eligible securities, select securities involving new materials as the candidates, including but not limited to the following fields: Advanced Basic Materials: advanced steel materials, advanced non-ferrous metal materials, advanced chemical materials, advanced non-metal materials. Key Strategic Materials: high performance fiber and composite materials, rare earth functional materials, advanced semiconductor materials & new display materials, new energy materials, Leading edge new materials.

(2) Rank the candidates by the average daily capitalization over the past year in descending order, select top 50 securities as the index constituents. If the number of candidates is less than 50, all the securities are included.

4. Index Calculations

The index is calculated according to the following formula:

Current Index = Current Total Adjusted Market-Cap / Divisor × Base Value

Where Current Total Adjusted Market-Cap = \sum (Security Price × Number of Free Float Adjusted Shares × Weight Factor)

For the calculation of number of free float adjusted shares, please refer to CSI Index Calculation and Maintenance Methodology for further details. The value of Weight Factor is between 0 and 1, which is calculated at each rebalancing date, so that the weight of each constituent is capped at 10%.

5. Constituents and Index Weights Adjustment

5.1 Constituent's Periodical Review

The index is adjusted and rebalanced quarterly and the adjustment will be effective as of the next trading day after the 2nd Friday of March, June, September and December.

Weight Factor is assigned to each constituent at each rebalancing date. The effective date is the same as that of the constituent adjustment. The Weight Factor stays the same until next rebalancing date.

5.2 Ongoing Review

When special events occur, CSI will review the index accordingly. Delisted securities will be deleted from the constituents. Please refer to Index Calculation and Maintenance Methodology for further details.
